## Retinal Photography

### What is Retinal Photography?

Retinal Photography is a state of the art technology that represents the latest in eye disease detection. It allows us to more thoroughly evaluate your retina. The image is kept in your records so it may be compared yearly at your annual eye examination. **No dilation is necessary for Retinal Photography. It is a simple photograph taken with a camera along with the pretesting procedures.**

### What is a Retina?

It is the sensitive tissue in your eye responsible for your vision. The retina is susceptible to a variety of diseases which can lead to vision loss. Early detection of retinal problems is crucial to preserving your vision.

### Who needs Retinal Photography?

Everyone! Even children should have baseline photos. It is especially recommended to have the photography done if you have any of the following conditions:

- Diabetes
- Hypertension (High Blood Pressure)
- Macular Degeneration
- Retinal Detachment
- Glaucoma
- High Myopia (Nearsightedness)
